

METAL DISINTEGRATORS

IQ

Precision Disintegrator Head

The IQ Disintegrating Head is a high performance head engineered for heavy duty and precision use. Using electrodes from .020" to 1" diameter (0.5 to 25 mm), it will take out broken tooling (taps, bolts, drills, fasteners) from 0-80 (.9 mm) tap size up to 1" (25 mm) diameter in a single pass. With a 20 KVA power supply it will handle up to 2" (50 mm) diameter. Larger diameters are handled in multiple passes.

The IQ Head body enables smooth movement with 9" of manual or automatic travel. Adjustable depth stop. Works in any position including horizontal and vertical.

The IQ has Thermal Protection preventing any potential damage from overheating and includes a 3 year warranty.

IQ Head ordered as a replacement does not come with the casting.
